

Aram Parsa, Ph.D., P.Eng.

Associate Professor, Mechanical Engineering

EDUCATION

- 2007 – 2012 **Doctor of Philosophy** in Mechanical Engineering
Department of Mechanical and Industrial Engineering,
Ryerson University, Toronto, Canada
- 2004 – 2005 **Master of Applied Science** in Mechanical Engineering
Department of Mechanical Engineering
University of Liverpool, Liverpool, UK
- 1996 – 2001 **Bachelor of Applied Science** in Mineral Engineering
Department of Mineral Engineering
Tehran Azad University, Tehran, Iran
- 1994 – 1996 **Pursued Bachelor of Applied Science** in Shipbuilding Engineering
Department of Mechanical and Shipbuilding Engineering
Amir kabir University, Tehran, Iran

SKILLS AND QUALIFICATIONS HIGHLIGHT

- Engineering expertise in stress analysis, finite element analysis (FEA), fluid mechanics, thermodynamics, heat transfer, computational fluid dynamics (CFD)
- More than six years full time academic experience in university
- Six years research experience during MSc and PhD studies
- Six years industrial experience in well-known EPC/EPCM engineering companies
- Professional Engineer license for more than 8 years
- Experienced in large industrial projects: oil & gas (Refinery, Gasification, Synthetic Gas), petrochemical (HDPE, Urea & Ammonia), nuclear (Power Plant), and mineral (Iron, Chrome)
- Well versed in standards and codes including ASME, ANSI, ASTM, API, CEMA, CMAA
- Professional organization membership history: ASME, AIAA, CIM, PEO, ESWP
- Knowledgeable in engineering, design, analysis and other software including Ansys, Fluent, MSC Patran/Nastran, HyperWorks, Matlab, Mathematica, Mathcad, Simulink, Solid Edge, Pro-E, AutoCAD, Solid Works, Micro-Station, MS Project, and MS Office

TEACHING EXPERIENCES

- Taught following courses as a full-time professor:

Fall & Spring 2015 to 2020	Statics Point Park University, Natural Science and Engineering Dept.
Fall & Spring 2015 to 2021	Dynamics Point Park University, Natural Science and Engineering Dept.
Fall & Spring 2015 to 2020	Properties of Materials Point Park University, Natural Science and Engineering Dept.
Spring & Fall 2019 to 2020	Fluid Mechanics Point Park University, Natural Science and Engineering Dept.
Spring 2020 & 2021	Heat Transfer & Heat Transfer Lab. Point Park University, Natural Science and Engineering Dept.

- Taught following online course as a full-time professor:

Fall, Spring & Summer 2018 to 2021	Elementary Statistics Point Park University, Natural Science and Engineering Dept.
---------------------------------------	--

- Supervised laboratories as a lab instructor and performed tutorial sessions as a teaching assistant in the following undergraduate courses:

Spring 2008	Stress Analysis Ryerson University, Mechanical Engineering Department
Fall 2008 & 2010	Fluid Mechanics I Ryerson University, Mechanical Engineering Department
Spring 2009 & 2010	Fluid Mechanics II Ryerson University, Mechanical Engineering Department
Spring 2010 & 2011	Heat Transfer Ryerson University, Mechanical Engineering Department
Spring 2011	Thermodynamics Ryerson University, Mechanical Engineering Department
Summer & Fall 2011	Calculus I & Numerical Analysis (MATLAB) Ryerson University, Mathematics Department

ACADEMIC GRANTS, SCHOLARSHIPS AND AWARDS

2008 – 2011	Ryerson Graduate Scholarship, Ryerson University (\$7000/year)
2009 – 2010	MITACS Accelerate Scholarship (\$8750)
2008 – 2010	Ryerson International Student Scholarships, Ryerson University (\$7000/year)
2008 – 2010	Access to Opportunity Program award for Engineering Doctoral Students, Ryerson University (\$4000/year)
2010	Canadian Space Agency grant for IAC2010 Conference (\$2750)

PUBLICATIONS AND PRESENTATIONS

- ❖ Parsa, A., Rahman, M.A., and Saghir, M.Z. “Experimental measurement of the effect of g-jitter on transport processes and comparison with numerical results” **(Under preparation)**
To be submitted: International Journal of Heat and Mass Transfer
- ❖ Matvey, K.M. and Parsa, A., “Cryogenic treatment of materials”
AIChE Annual Meeting, Orlando, FL, November 10 – November 15, 2019
- ❖ Parsa, A., Tabatabaei, S., Rajabzadeh, A.R., “CFD Modelling of a Dry Electrostatic Protein Separation Approach”
AIChE Annual Meeting, Pittsburgh, PA, October 28 – November 2, 2018
- ❖ Albrahim, K.K. and Parsa, A., “Finite Element Analysis of a flange under static load using two different materials”
AIChE Annual Meeting, Pittsburgh, PA, October 28 – November 2, 2018
- ❖ Parsa, A. and Saghir, M.Z. “Fluid flow behaviour of a binary mixture under the influence of external disturbances using different density models”
Journal of Fluid Dynamics and Material Processing, 2011
(vol.8, no.1, pp.27-49, 2011)

ACADEMIC EXPERIENCES

Assistant/Associate Professor

2015 – Present

Natural Science and Engineering Department,
Point Park University, Pittsburgh, PA, US

- Taught undergraduate courses, advised undergraduate students, enhanced curriculum, contributed to university and professional services, and interdisciplinary collaborations;
- Participated in program assessment, ABET accreditation activities;
- Research studies in collaboration with other universities;
- Involved students in projects which results in conference presentation;
- Collaborate with industries as part of my teaching effort, having well experienced and educated professionals in my classrooms to discuss relevant projects;
- Field trip arrangement to relevant industrial facilities for students to have a better feeling of the theory discussed in the classroom for the course.

Research Assistant

2007 – 2011

Thermal Diffusion and CFD Lab., Mechanical Engineering Department
Ryerson University, Toronto, ON, Canada

- Conducted analytical and numerical analysis in Fluid Mechanics, Thermodynamics, Heat Transfer, Mass Transfer and Computational Fluid Dynamics;
- Performed detail analytical, numerical, and computational analysis of thermal diffusion, component separation and fluid flow in binary and ternary mixtures under the influence of temperature and vibration in zero gravity environment of International Space Station (ISS);
- Analyzed the experimental results obtained from ISS utilizing image processing methods.
- The experiments performed in ISS by Canadian astronaut Robert (Bob) Thirsk;
- Performed computational fluid dynamics analysis utilizing commercial software packages such as Ansys Fluent and Fidap;
- Model the experiment using the proper Equation of State (PC-SAFT) utilizing the related CFD code. The similar existing models available in the literature have lot of simplifications that compromise the accuracy of the results;

- Performed numerical analysis and post processing utilizing Matlab, Mathematica and Tecplot software and packages;
- Modified in house codes written in Fortran and C/C++ to solve unconventional problems not available in commercial software;
- Benchmarked results between three scientific groups of SODI-IVIDIL project research team (Canada, Belgium and Russia) and prepared corresponding reports and presentations;
- Validated and compared the numerical and experimental results for various scenarios;
- Spent few months at Canadian Space Agency (Montreal, Saint-Hubert) to analyze the random vibrations recorded at International Space Station;
- Obtained through the analyses, solutions to improve the accuracy of future experiments on-board ISS with applications in oil & gas reservoirs composition prediction.

Research Assistant

2004 – 2005

Applied Mechanics and FEA Lab., Mechanical Engineering Department,
University of Liverpool, Liverpool, UK

- Investigated the relation between internal forces and natural frequency to reduce and control vibration in helicopter (especially pilot seat) which has been always a complex and challenging task;
- Conducted analytical analysis, Finite Element Analysis and experimental tests;
- Prepared and designed the model based on the theory.
- Prepared the drawings from the 3D model to manufacture the test prototype at shop;
- Defined the loading and boundary condition of the experiment based on the theoretical and analytical analysis;
- Performed Finite Element Analysis utilizing MSC Patran/Nastran software;
- Performed the experiment and compared the FEA and test results for conclusion.

INDUSTRIAL EXPERIENCES

Mechanical Engineer

2014 – 2015

Mechanical Engineering Department,
WorleyParsons, Markham, ON, Canada

- Design of Service Air, Breathing Air, and related low-pressure water-cooling systems in Darlington Nuclear power plant;
- Code compliance review and analysis of Pressure Regulating Valves (PRV) in nuclear power plant to confirm the safety requirements;
- Review nuclear power plant various areas and rooms to ensure penetrations and openings are code compliance as per NFPA and CSA standards requirements;
- Analysis of recovery water cooling system to find the proper design change to reduce vibration due to water hammer and two-phase flow conditions.

Intermediate Mechanical Engineer

2011 – 2014

Mechanical Engineering Department,
HATCH Ltd., Mississauga, ON, Canada

- Completed technical engineering activities through conceptual design, prefeasibility and feasibility analysis, and detailed design phases of large industrial projects;
- Produced conceptual and detail design for custom machinery, tools and specialized equipment involving sizing, selecting, stress analysis, fatigue analysis, thermal analysis, material selection, engineering calculations, and 3D CAD design review and modification;
- Directed, and provided technical guidance to engineers and designers through the project;
- Conducted budgeting, resourcing, scheduling and other project management activities as lead project engineer;
- Conducted technical meetings with clients, contractors and vendors to resolve design conflicts;
- Provided various proposals for budgetary estimate, scope of work definition and milestone deliverable purposes;
- Completed preparation and review of design criteria, technical specifications, data sheets, material take offs, bill of materials and operation manuals;
- Reviewed, amended and approved PFD, P&ID, Plant Layout, GA and detail drawings;
- Liaised with vendors for RFQ and vendors technical bid evaluations;
- Performed technical inquiries to vendors and manufacturers to optimize the design for better conformity to process requirements and cost reduction;
- Conducted vendor drawing verification and approval, inspection during fabrication, testing and commissioning;
- Worked in major projects including:
 1. Praxair CMAR furnace and plant (natural gas to synthetic gas process plant)
 2. SASOL (coal based synthetic fuel plant)
 3. OPG Pickering nuclear power plant refurbishment (spent fuel bay handling system)
 4. Cliffs chromite (ferrochrome processing plant)
 5. Kinross TASIAST (gold processing plant)
 6. Vale ONCA PUMA (nickel processing plant)

Mechanical Engineer

2005 – 2007

Mechanical Engineering Department,
Namvaran Consulting Engineering Company, Tehran, Iran

- Completed extensive specialized training in process & hydraulic calculation, material & corrosion, NDE, material selection, fire protection system design, piping & plant design, fixed & rotating machinery equipment, material handling and storage system, and HVAC;
- Conducted technical engineering activities through conceptual design, prefeasibility and feasibility analysis, and detailed design phases of large industrial projects;
- Prepared, reviewed and commented on Plant Layout, PFD and P&ID design documentation in collaboration with other engineering departments and disciplines;

- Directed and coordinated designers through the 3D CAD design of the equipment and plant;
- Conducted technical meetings with clients, contractors and vendors to resolve design conflicts;
- Completed thorough vendor proposal assessment to design, size and select various equipment;
- Prepared and reviewed design criteria, technical specification, data sheet, material take off and bill of material;
- Selected appropriate material to meet the design and operating conditions by studying standards, codes and manufacturer data sheets;
- Reviewed, amended and approved contractor shop drawings and documents and coordinated their work on site;
- Liaised with vendors for RFQ, reviewed vendor documentation for conformance to standards, codes and specification and vendor technical bid evaluation;
- Worked in major projects including:
 1. Mahshahr High Density Polyethylene (HDPE) expansion
 2. Kermanshah urea and ammonia petrochemical complex
 3. Jalal Abad iron ore concentration plant
 4. Esfahan refinery expansion

Engineer

2002 – 2004

Engineering Department,
Madankav Consulting Engineering Company, Tehran, Iran

- Conducted consultancy, engineering and project management services in mining and mineral processing projects and proposals;
- Evaluated the feasibility of new mineral processing plants in various regions of Iran;
- Conducted technology, system and operational feasibility study of mineral processing projects.

Co-op Engineer

1999

Engineering and R&D Department,
Poudrsazan Company, Tehran, Iran

- Worked in super micronized mineral powders production lines;
- Worked in the engineering and R&D departments and involved in the design modification and optimization of the micronized mineral powders production lines
